

Organic Fertiliser

New Era High N

Organic Nitrogen Fertiliser

New Era High N is a high quality, high analysis pelletised fertiliser based on composted poultry manure and feather meal. It provides a microbe friendly source of nitrogen (8% N), phosphorus (1% P) and potassium (1% K) for improved soil and plant health.

Certified input for organic farming

Nitrogen is a major constituent of several of the most important substances which occur in plants. It is of special importance that nitrogen compounds comprise 40-50% of the dry matter in protoplasm (the living substance in cells). So as a results and to sustain all growth processes, plants require relatively large amounts of nitrogen.

Insufficient nitrogen can result in stunted or relatively under-developed plants and severely reduced yields.

Organic farmers use manure/compost based crop nutrition systems that regularly over supply phosphorus and under supply nitrogen. **New Era High N** is a convenient cost-effective source of nitrogen.

For both horticultural and broad-acre situations.

Use as a pre-plant or side-dress at 200kg to 2t/ha.
(Confirm your crop requirements via soil & tissue analysis)

Typical Analysis: N - 8%, P - 1%, K - 1%, Ca - 1%, Mg - 0.14%
S - 0.25%
