

## DAVID GRAYS AQUA WETT

David Grays Aqua Wett is a non toxic 100% concentrate of surface active agents that, when used according to directions, will increase water penetration in dry or water repellent soils. This promotes even and strong seed germination, drainage of excessive soil moisture, and conserves water by increasing effectiveness, resulting in less frequent watering being required. One application of David Grays Aqua Wett will last for 12 months.

### DIRECTIONS FOR USE:

For Lawns, Garden Beds, Golf Courses, Bowling Greens and Tennis Courts mix 50ml of David Grays Aqua Wett with 10 litres of water and apply to 10 square metres (equivalent to 50 litres per hectare). Aqua Wett should be watered into the soil after application.

For Hanging Baskets and Pot Plants saturate the soil with a mixture of 20ml Aqua Wett in 10 litres of water.

For best results application should be made during the cool of the day and it is NOT recommended to apply fertilisers at the same time as Aqua Wett.
