AQUAFORCE premium wetting agent for turf.

Apply where:

- Improved penetration is required e.g. Polished compact Surfaces
- Adequate water with application is feasible
- Longlasting effectiveness is required

Application rates

	MONTHLY PROGRAM*	90 DAY PROGRAM
AQUAFORCE	20 Ltr/Ha	50 Ltr/Ha
IN WATER	1000 Ltr/Ha	2000 – 2500 Ltr/Ha
WATER IN WELL AFTER APPLICATION		

*In very hard to wet situations (e.g. WA) start the season with 50 ltr/ha before reverting to the monthly program.

Aquaforce combines a highly penetrating function to break through the water repellent barrier with retention ability to absorb onto the soil particles. This provides a water attracting surface to assist water to easily pass through the turf profile. Water utilisation and retention is improved and long lasting performance is achieved.

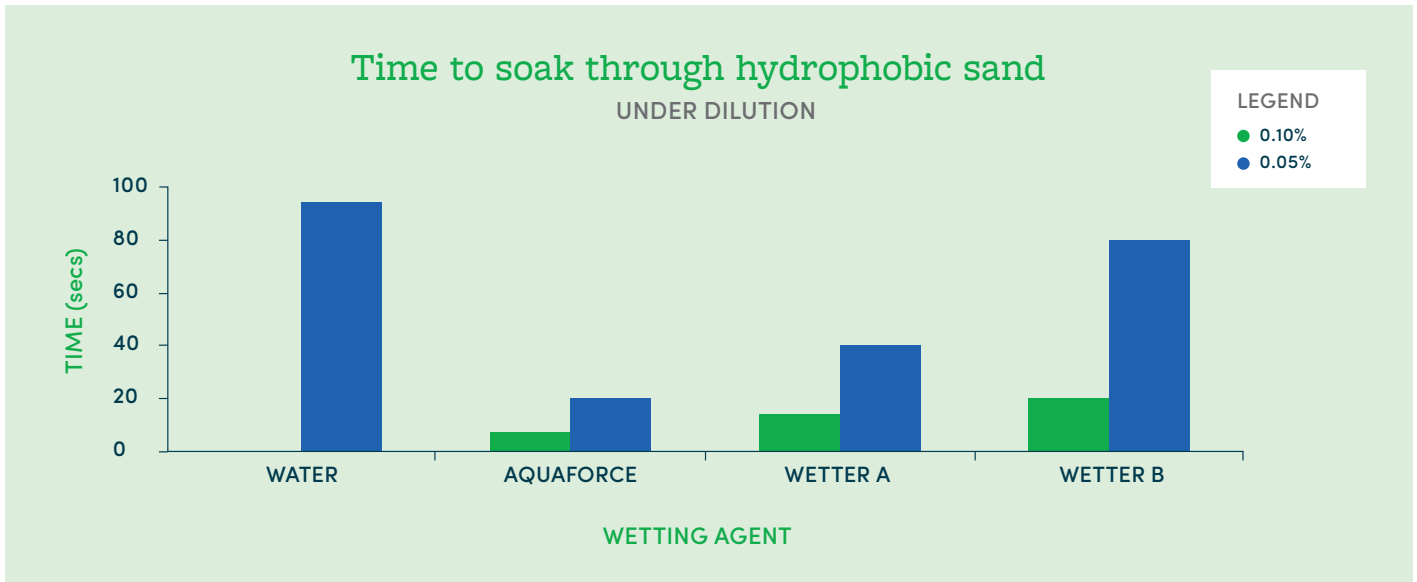

With the unique 5 active components:

RAPID PENETRATION
EXCELLENT REWETTING
LONG TERM PERFORMANCE
WATER RETENTION
BREAKDOWN HYDROPHOBIC BUILD UP

WHAT MAKES AQUAFORCE DIFFERENT?

AQUAFORCE continues to penetrate under dilution. Other wetters stop penetrating under irrigation (see below)

- This ensures excellent vertical and lateral penetration of the soil
- Wetter is uniformly distributed in the profile
- Thorough rewetting is achieved under irrigation
