Selontra® Soft Bait

Rodenticide

Game-changing rodent control for high-pressure and sensitive situations

- Highly palatable and stable formulation
- Non-anticoagulant active which does not bioaccumulate
- Superior performance up to three times faster than anticoagulants
- Stop-feeding effect preventing bait wastage and maximising cost savings
- Flexible and diverse use pattern with approval for use on and off buildings including perimeter fence lines

Selontra® Soft Bait

Rodenticide

Selontra® Soft Bait Rodenticide is a highly effective, innovative rodent bait that rapidly controls rodent infestations and offers several unique advantages including shorter baiting regimes and higher palatability. Selontra is powered by a non-anticoagulant (non-AVK) active ingredient, and formulated into a stable, highly palatable soft block formulation. The active ingredient in Selontra is neither persistent nor bio-accumulative unlike first and second-generation anticoagulants. Selontra controls rodents up to three times faster than anticoagulant rodenticides and has a stop-feeding effect, which results in reduced bait wastage and significant cost savings.

SITUATION	PEST	RATE	CRITICAL COMMENTS
In and around domestic homes, industrial, commercial and agricultural buildings, animal houses, farms, wharves, public service buildings, hospitals, food processing facilities, abattoirs, transport vehicles (including ships), around grain terminals, storage areas and fence lines (including perimeter fence lines).	Rats – <i>Rattus rattus</i> also known as Black rat, Roof rat, Ship rat or, Fruit rat and <i>Rattus norvegicus</i> also known as the Brown rat or Norway rat	3 - 9 Selontra Soft baits per bait station	<p>Eliminate as far as practicable all alternative food sources. Select suitable bait locations, such as along rat runs or areas exhibiting signs of infestation. Try to establish a barrier of bait locations between living and feeding areas. Secure 3 - 9 Selontra Soft Baits at each bait location. Selontra Soft Baits must be secured within lockable tamper resistant bait stations.</p> <p>On initial application, an inspection of bait locations after 3 days may be undertaken to determine activity in bait locations and new locations may be selected if necessary. A subsequent inspection may also be undertaken again after 4 days to replace any soft baits which have been eaten.</p> <p>For severe infestations it is recommended that repeat inspections of all bait locations is conducted at 7 day intervals, replacing fresh Soft Baits only when Soft Baits have been eaten and until all signs of rat activity have disappeared.</p>
	Mice – <i>Mus musculus</i> also known as the House mouse	1 - 2 Selontra Soft Baits per bait station	<p>Mice have very limited home ranges and do not need to drink. They are more difficult to control than rats because their feeding patterns are more erratic. Selection of bait locations is therefore even more important than for rats.</p> <p>Secure 1-2 Selontra Soft Baits within tamper resistant bait stations 2-3 metres apart. Bait locations should be in areas where activity is obvious, particularly where droppings are seen. Inspect bait locations and replace Selontra Soft Baits as for rats until all signs of mouse activity have disappeared.</p>

Refer to the product label for full directions and use table.

Packaging

Available in 5kg buckets.
