- Application to free draining profiles assists in water retention
- Can reduce irrigation requirement by half
- Beneficial in marginal water allocation areas
- Improves root zone moisture management

In situations where water is lost due to run-off, evaporation, or rapid drainage, application of BI-AGRA can improve utilization and reduce usage of water. Moisture content can be increased by up to 5x in the root zone at field capacity. Can last up to 6 months.

Application rates

- BI-AGRA - 50 Ltr/Ha
- WATER RATE - 1000 Ltr/Ha
- WATER IN AFTER APPLICATION

Apply early November and early January.
A 3rd application may be beneficial in late March to maximize benefits of Autumn rain.
