

Rudduck Rodenticide Paste

INTRODUCTION

Rudduck Rodenticide Paste is currently in use throughout the world providing excellent control against rodent pests. Rudduck Rodenticide Paste is formulated to be **palatable to rodents**, easy to use, effective and to minimise any risk to the environment and non-target organisms.

PALATABILITY AND EFFICACY

Rudduck Rodenticide Paste has been developed specifically to control rodents. Incorporating a warning dye, coloured blue, with a unique edible bait base, specially formulated to ensure maximum palatability. Laboratory and field trials have been carried out to establish efficacy against rodent infestations. These trials have shown that paste baits are most palatable and are **extremely effective** as a method of rodent control. Trials have also shown Rudduck Rodenticide Paste will be consumed where blocks and soft baits are not taken. Rudduck Paste is the **perfect alternative** when other baits are not being taken. Rudduck Paste is also consumed in areas where there is a high level of competing food sources.

EASY TO USE

Rudduck Rodenticide Paste is supplied in standard 300g caulking cartridges, so **baiting is clean and easy**. Direct contact with the bait is avoided. Due to the nature of the paste formulation it readily sticks to the inside of tamper resistant bait stations. A single tube can provide from 40(*Rat*) up to 100(*Mouse*) bait placements. **Rodent activity is easily detected** as the smooth finish of recently applied bait readily shows rodent teeth marks. Once inspected, baits can be smoothed over allowing any new marks to be observed at the next Inspection. The waterproof nature of Rudduck Rodenticide Paste helps protect it from deterioration in wet and damp conditions.

PRODUCT SPECIFICATIONS

Packaging: 300g Caulking tube
Active Constituent: 0.1g/kg Bromadiolone

Always read the label and product information before use
